Agent Handshake

Every tool for your agent. One handshake.

The open agent aggregator. Connect once; your agent finds, tries and uses tools by itself.

Pitch deck · November 2026 · Gus Garza · github.com/larvuz2/agent-handshake

THE PROBLEM

Adding a tool to an AI agent is still copy and paste

Agents get their abilities from tools. But getting a new tool into an agent is manual, unsafe and unpaid.

PEOPLE

Paste and pray

Paste instructions or API keys into the agent, one tool at a time. No trial, no idea what's used, no clean uninstall.

AGENTS

Stuck with what they have

They can only use what someone wired up in advance. Ask for something new and they can't find or add a tool.

TOOL MAKERS

No way to reach agents

No distribution, no trial flow, no way to charge an agent. Every agent app installs tools differently.

“Paste this into your agent” is the install flow of the agent era. It doesn't scale.

THE SOLUTION

Connect once. Your agent finds, tries and uses tools.

Agent Handshake is one front door to every tool, with free trials, spend limits and one place to manage everything.

1

Connect once

Claude, Cursor, VS Code... One screen to approve, about 30 seconds.

2

Ask for anything

“Make me a 15-second video of a sunrise.”

3

Agent searches

It finds a tool in the catalog and reads its terms.

4

Free trial starts

Scoped, metered, $0 spend limit. The tool does the job.

5

Keep, pay or remove

Paid plans always need the person, on a checkout page.

No pasting. No API keys. Every new tool after the first connect: 0 or 1 click.

IT WORKS TODAY

An agent gets a new skill in one conversation

Make me a 15-second video of a sunrise over a lake.

`handshake_search · “video”`

L **Lumen Video**
Free for 7 days · up to 100 calls · then $9/mo

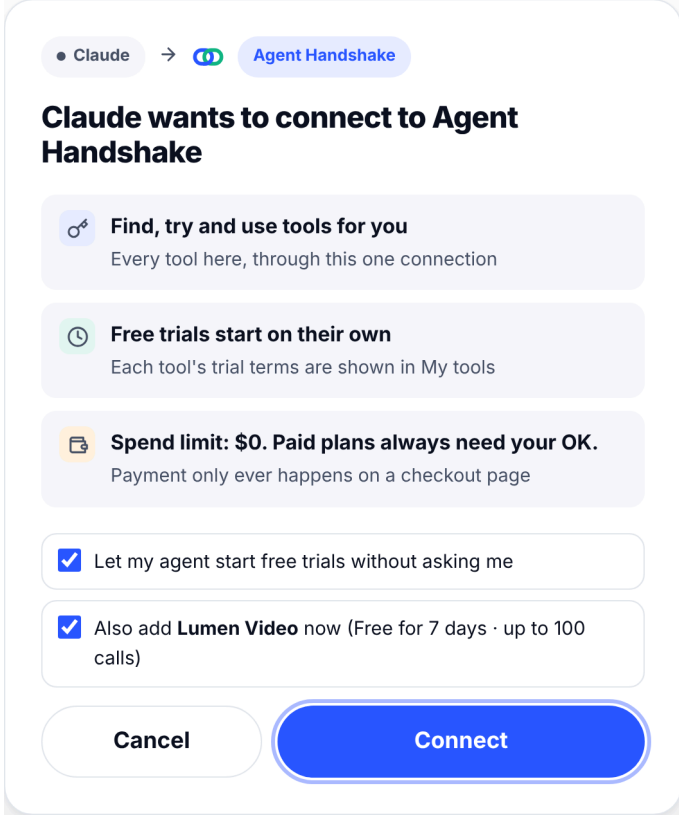

`handshake_add · lumen-video`

`lumen-video__create_project`

Done: 3 shots (sunrise, lake, close-up). Want a preview?

Render it in 4K.

4K is on Pro ($9/mo): upgrade link. You pay on that page, never in chat.

The one screen a person approves (real product)

```
$ npx github:larvuz2/agent-handshake demo
```

Open source. Runs on a laptop in 60 seconds.

ONE HUB, THREE WINNERS

Everyone in the agent economy gets what they're missing

PEOPLE

Control without effort

- Connect once, then 0–1 click per tool
- Free trials at a $0 spend limit
- One page to keep, upgrade or remove
- “Let my agent start trials”: on or off

AGENTS

Abilities on demand

- One MCP connection, seven tools
- Search the catalog in plain words
- Added tools appear natively
- Clear rules: trials yes, payments via the person

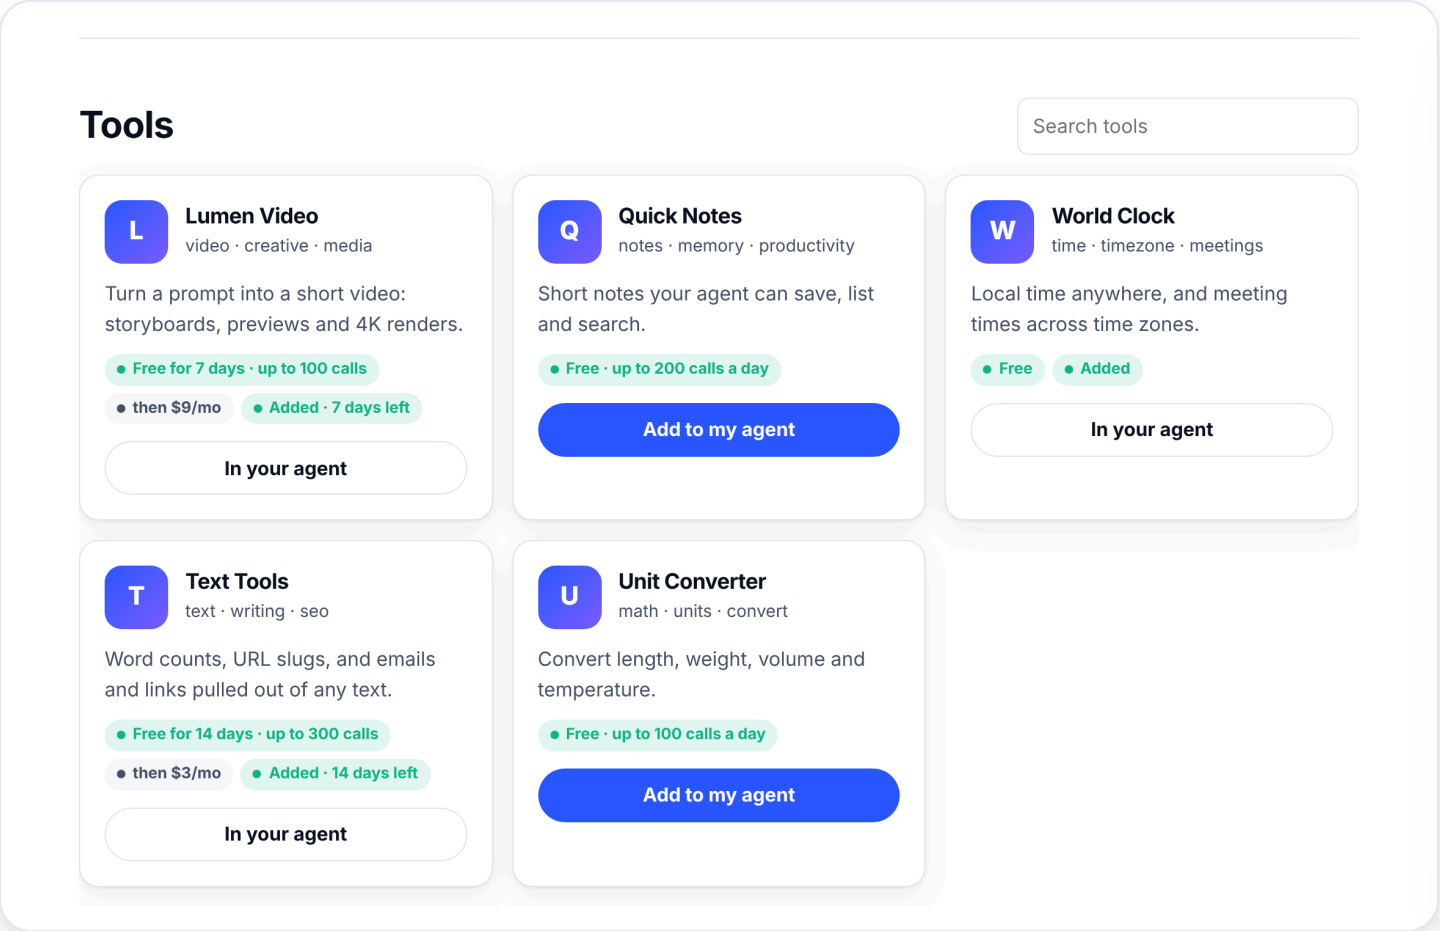

TOOL MAKERS

Distribution and revenue

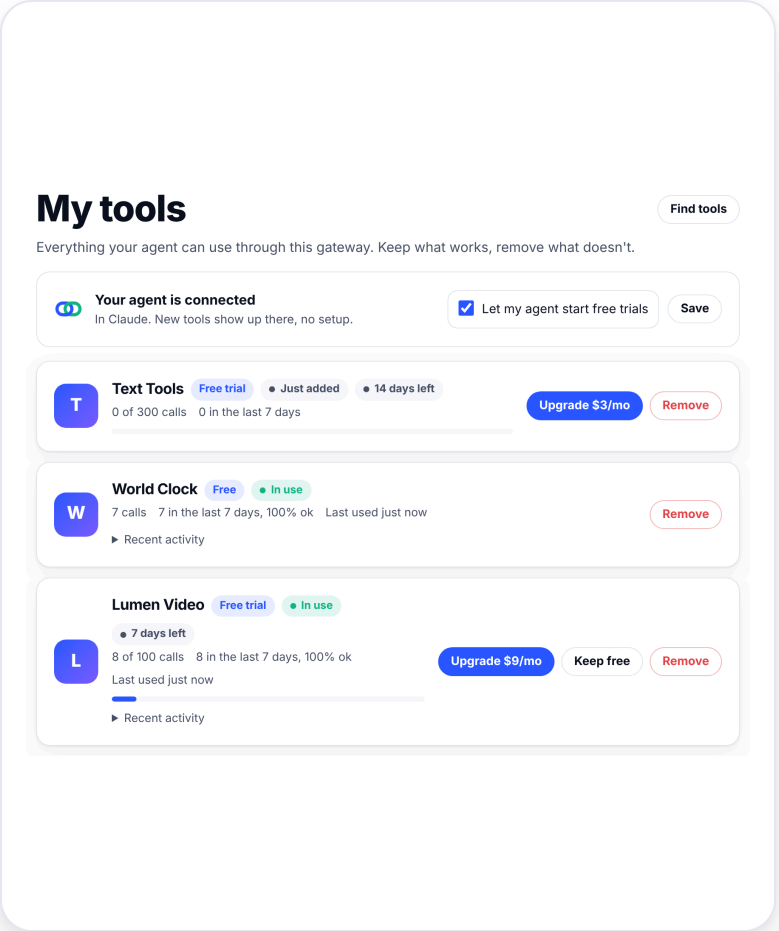

- Reach every connected agent
- Trials, scopes and metering built in
- Stripe subscriptions or x402 per call
- Your MCP server doesn't change

THE PRODUCT

A catalog for people, a front door for agents

The catalog: each tool with its free trial and a one-click add

My tools: usage labels, upgrade, remove

WHY NOW

The plumbing just landed. The layer on top is unclaimed.

2025–2026

MCP won

Claude, ChatGPT, Cursor, VS Code and Goose all connect to remote MCP servers with OAuth. The July 2026 spec made servers stateless, so hubs are cheap to run.

LIVE

Agents can pay

x402, now a Linux Foundation project, lets agents pay per call in stablecoins. Card checkouts handle subscriptions.

DRAFTING NOW

Discovery is forming

MCP Server Cards and the AI Catalog standardize how tools describe themselves. Nobody owns trial, billing and control.

Nobody owns the step between “found a tool” and “it's working and paid for”.

PROTOCOL AND PRODUCT

An open protocol, and the best place to use it

Like email: an open standard anyone can implement, plus a flagship service people choose.

Agent Handshake hub

Catalog · agent tools · consent · My tools · flagship hosted hub

Agent Handshake protocol (open, MIT)

Trial and price terms · hub card · one install link · entitlements · spend limits

Standards that already won

MCP · OAuth 2.1 · MCP Server Cards · AI Catalog · x402

Why open wins here

- Tool makers want one listing for every agent app
- Agent apps can support it without a partnership
- Anyone can run a hub; people still want one place for all their tools
- Namespaced extensions move with the standards

BUSINESS MODEL

We earn when tools earn

FROM THE FIRST PAID TOOL

Take rate

A share of subscriptions and pay-per-call volume that flows through the flagship hub.

Rate: TO SET

MONTHS 3–6

Hosted gateways

Tool makers pay for hosting, custom domains, analytics and conversion tools.

MONTHS 6–12

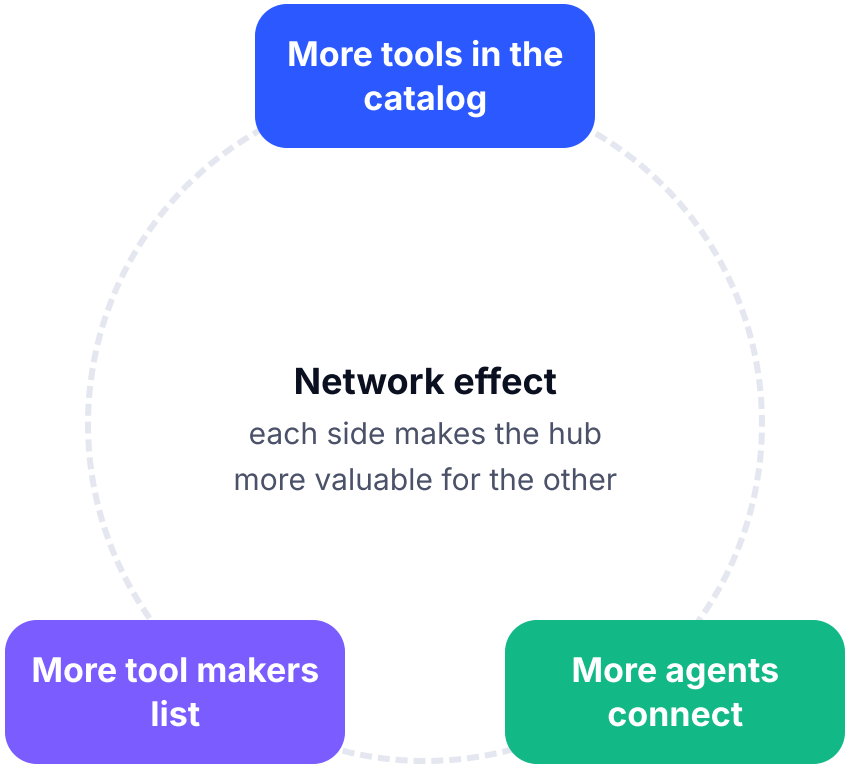

Private hubs

Companies run an approved-tools hub for their employees' agents, with policy, audit and central billing.

Benchmark the take rate and prices against app stores and payment platforms before committing to numbers.

WHY WE WIN

A flywheel, and the relationship at its center

We hold the relationship

Spend limits, trials and My tools live in the hub. Agents keep using the same front door.

Usage becomes ranking

Real calls, success rates and keep/drop decisions make search better than any static directory.

Neutral, open and shipped

Works across every agent app. v0.2 is live code, tested with the official MCP SDK.

LANDSCAPE

Others list or host tools. We close the loop.

CATEGORY	WHAT IT DOES	OUR DIFFERENCE
Registries	e.g. the official MCP Registry: lists servers	We handle install, trial, billing, limits and uninstall, and agents add tools themselves
App-specific directories	Directories inside individual agent apps	One listing works across every agent app
Integration platforms	Hosted MCP servers and integrations	An open, cross-app marketplace layer with trials and spend control built in
Agent Handshake	The open agent aggregator	Connect once · agent-driven discovery · trials · payments · one place to manage

Landscape as of November 2026. Verify specifics before pitching.

GO-TO-MARKET

Supply first, then every tool's audience becomes ours

1

Seed 30–50 tools

Our own (Slopia, ShotForge, Capyverse, agentesPRO) plus free utilities and partners.

2

Makers' buttons

Every “Add to my agent” button connects people to the hub. They come for one tool and stay.

3

Agent-native

Hub listed as an MCP server in the registries and app directories, with llms.txt for agents.

4

Open source

“List your tool in 5 minutes”, templates and a public catalog repo.

5

Show the magic

Short demos of agents adding skills. Spanish-language markets as a wedge.

Connected agents **Tools added per agent** **Weekly active tools** **Trial → paid conversion** **Revenue through the hub**

WHERE WE ARE

Built and tested. Next: the flagship hub.

SHIPPED · V0.2 · OPEN SOURCE

- Hub with seven agent tools; added tools appear natively
- Consent, free trials, scopes, call caps, metering
- Stripe checkout and x402 pay-per-call with spend limits
- Works with Claude, Claude Code, Cursor, VS Code, Goose, ChatGPT
- 93 automated tests plus the official MCP SDK client
- Independent security review, all findings fixed

TARGETS, NOT TRACTION

Day 30	Flagship hub live, 30 tools, first 100 connected agents
Day 90	1,000 connected agents, 10 makers with paid plans, first take-rate revenue
Day 180	Hubs list each other's tools (federation), public catalog repo, first private-hub customer

THE ASK

Raising $ AMOUNT to own the agent's front door

To run the flagship hub, sign the first 50 tools, bring the protocol to the standards groups, and hit the Day-180 milestones.

Use of funds

- Flagship hub: hosting, security, uptime
- Tool partnerships: the first 50 tools
- Standards work: terms and hub extensions
- Growth: demos, community, Spanish-language launch
