Adding a tool to your AI agent, screen by screen

What a person does instead of pasting text into their agent. Example: adding **Lumen Video** (a fictional tool) to **Claude**.

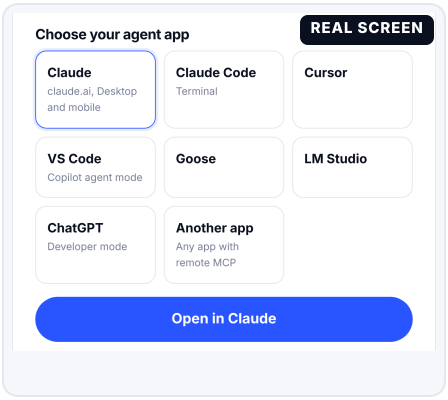

5 clicks, about 30 seconds · No account, no API key, no card · Free trial with a $0 spend limit · Remove anytime, access ends at once

1 Click "Add to my agent" — 1 click

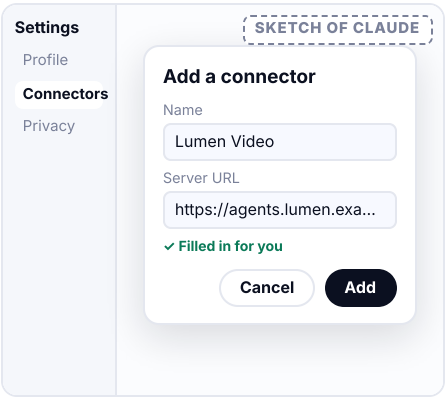

On the tool's website, docs or README. This replaces the block of text you used to paste.

2 Choose your agent app — 1 click

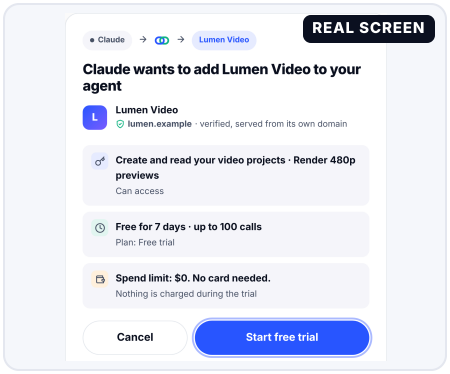

The tool's page shows what you're getting, then **Open in Claude**. It remembers your app next time.

3 Your app adds it — 2 clicks

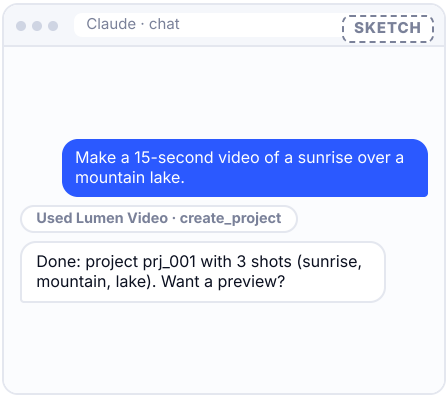

Claude opens its own **Add connector** box, already filled in. Click **Add**, then **Connect**.

4 Start the free trial — 1 click

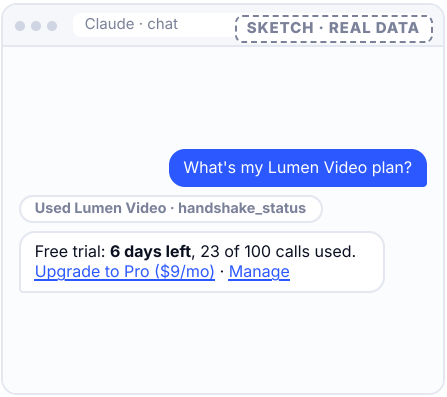

Three lines: what it can access, how long it's free, the spend limit. **Start free trial** sends you back to Claude.

5 Just ask your agent — 0 clicks

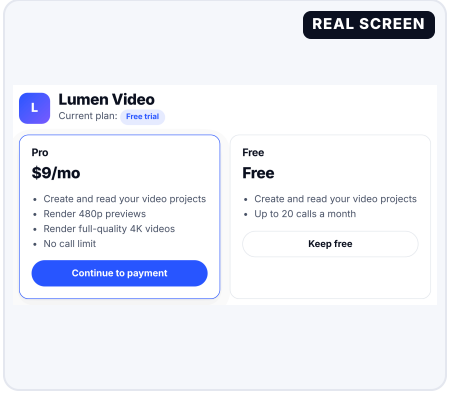

The tool's actions are ready right away. Tools outside the plan stay hidden until you upgrade.

6 Ask "what's my plan?" — 0 clicks

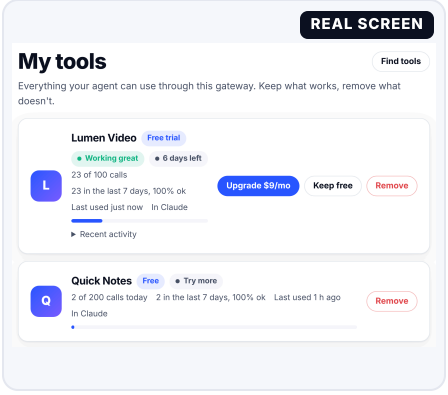

Every tool gets a built-in status check. Its links open in the browser, never a payment in chat.

7 Trial ends: pick a plan — your choice

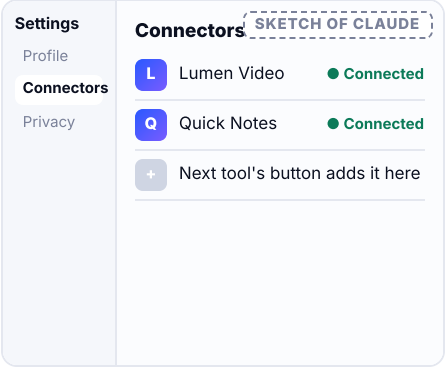

The agent says the trial ended and shares a link to this page. **Pro** opens a normal Stripe checkout.

8 My tools: keep or remove — anytime

One page per gateway with usage labels. **Remove** revokes access at once.

9 Add the next tool — repeat 1–4

Each new tool: click its button and repeat steps 1–4. Each tool shows up as its own connector in your app.

Install · Use · Keep, pay or remove · More tools

"Real screen" = captured from Agent Handshake v0.1. Sketches show the tool's own website and your agent app, which look different everywhere. Click counts are for Claude; Cursor and VS Code are similar, Claude Code uses one command. github.com/larvuz2/agent-handshake
